

Release 2022 R1 Highlights Photonics (Lumerical)

Ansys Cloud HPC Services Integration

- Native UI widget in-product for interfacing with Ansys Cloud HPC Services
 - login, connection status, job submission/monitoring/control, file upload/download
- Support for Batch (distributed) Solves and Parametric Sweeps
- Complements the VDI access to Ansys Cloud Direct introduced in 2021 R2

The screenshot displays the Ansys Cloud web interface. At the top, the 'Jobs' section contains a table with columns: Name, State, Start time, Finish time, Progress, Download state, and Id. The table lists several jobs, including 'display of CppStartedJob' and multiple 'FDE Solver' jobs with various states (Running, Completed, Queued, Stopped). Below the table is a 'Logs' section with a dropdown for 'type' (MainTranscript) and a 'show' button. On the right, a 'New Job' dialog box is open, showing hardware settings (Region: eastus, Machine type: HB60rs, Total number of cores: 60) and solver settings (Version: 2021R2, Active solver: FDE). The 'Project' section shows a file list with columns: Name, Size, Type, and Date Modified. The file 'PN_phase_shifter.lms' is listed with a size of 2.38 MiB and a date of 2021-11-23 3:39. The dialog box has 'OK' and 'Cancel' buttons at the bottom right.

Name	State	Start time	Finish time
display of CppStartedJob	Running	07/07/2021 11:48:27 AM	
FDE Solver: PN_phase_shifter	Running	18/11/2021 7:02:08 PM	
FDE Solver: voltage_1	Running	19/11/2021 3:06:07 PM	
FDE Solver: voltage_1	Completed	22/11/2021 2:22:32 PM	22/11/2021 2:26:49 PM
FDE Solver: voltage_2	Completed	22/11/2021 2:22:54 PM	22/11/2021 2:27:16 PM
FDE Solver: voltage_3	Completed	22/11/2021 2:23:17 PM	22/11/2021 2:28:20 PM
FDE Solver: voltage_e_1	Queued	23/11/2021 11:45:02 AM	
FDE Solver: voltage_e_2	Stopped	23/11/2021 11:45:25 AM	23/11/2021 11:49:05 AM
FDE Solver: voltage_e_3	Stopped	23/11/2021 11:45:49 AM	23/11/2021 11:48:35 AM

Name	Size	Type	Date Modified
PN_phase_shifter.lms	2.38 MiB	lms File	2021-11-23 3:39

Photometric Simulation

Ansys Speos

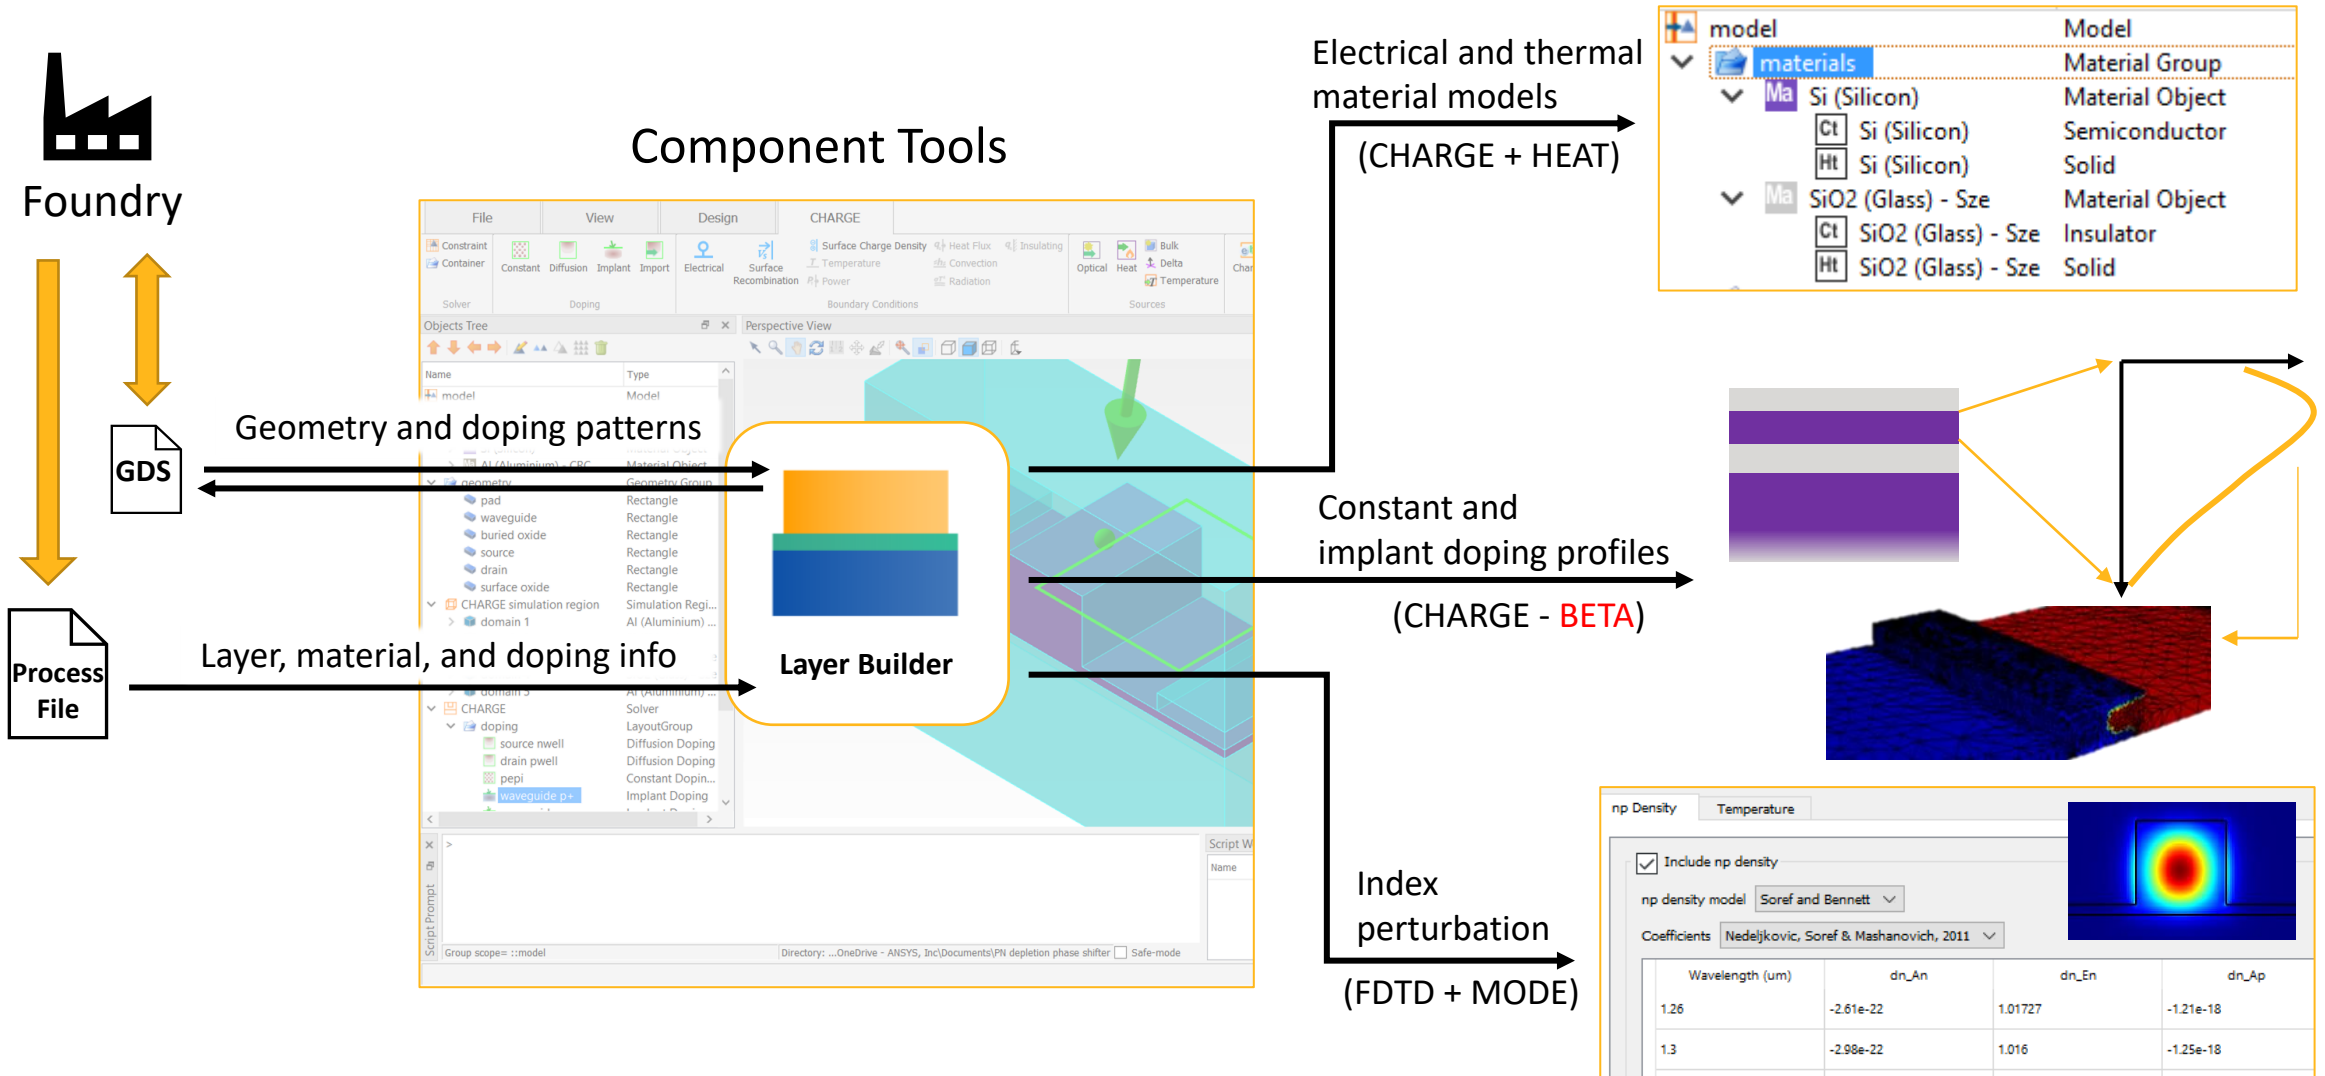

Experience

Fully leverage fast STACK simulations in optiSLang workflow with enhanced integration:

- Lumerical application persists throughout iterations, avoiding additional start-up overhead
- Lumerical script files can be run directly without loading or running a project file

Ansys

Process Enabled Active Photonic Component Design (BETA)

CML Compiler & Verilog-A Feature Updates

New and improved INTERCONNECT and Verilog-A photonic models

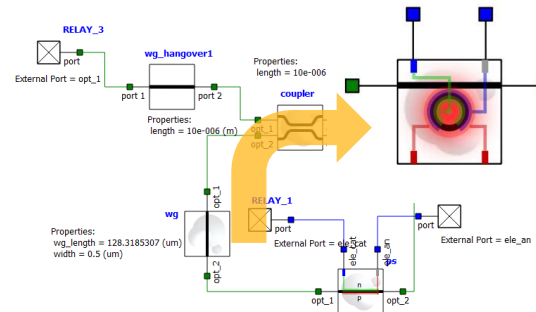

Forward-biased Phase Shifter

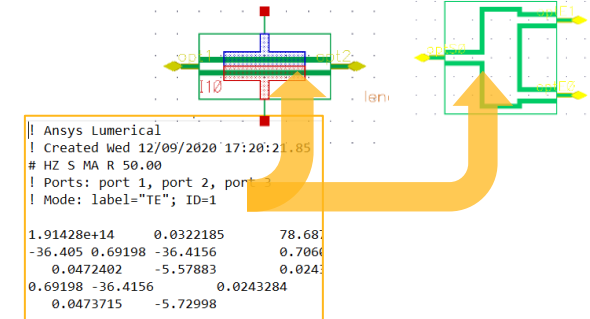

Avalanche Photodiode

Data-driven ring modulator

Customized compound model generation

Build Verilog-A models using Touchstone data

Improved usability

Data validation

Element build=status

Template deployment

Optical monitor for photonic Verilog-A signal

Statistical Verilog-A photonic models

waveguide

Forward/reverse-biased Phase Shifter

Parameterized Photodiode

Grating Coupler

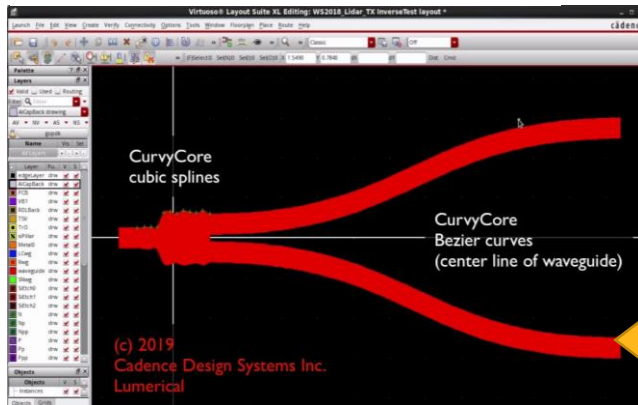

Virtuoso Layout Integration

Design Challenges:

- Users need to define layouts in both layout editor and FDTD/MODE solvers, which is time-consuming
- Inconsistency between two layouts is difficult to resolve
- Exporting GDS to FDTD/MODE does not support parametric analysis

Goal: Facilitate component design through direct integration with Virtuoso Layout

Virtuoso Layout Suite

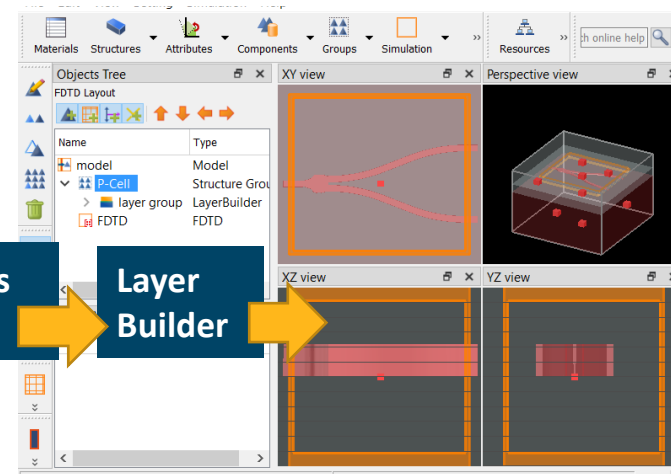

direct bridge

Analysis Group

Layer Builder

FDTD/MODE

Communicate layout data between Virtuoso and FDTD/MODE

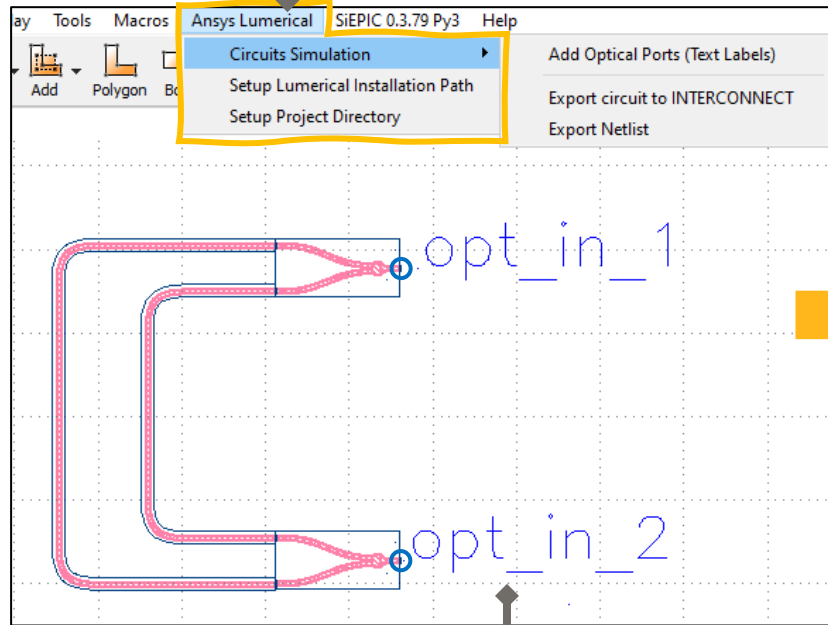

- Query properties of parameterized cells
- Obtain polygon vertices and pins for given parameter values
- Easy optimization of P-Cells

KLayout Integration

Ansys-Lumerical Package

- Open-source project in collaboration with SiEPIC program
- **Goal:** create integration to support photonic layout-driven circuit designs and simulations

KLayout

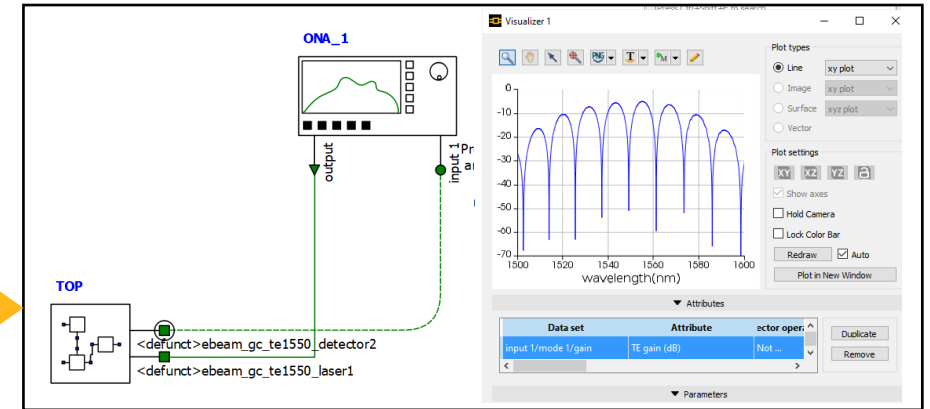

New text-type optical I/O ports

Circuit Netlist

Export netlist to INTERCONNECT

INTERCONNECT

Major enhancements to optical netlister

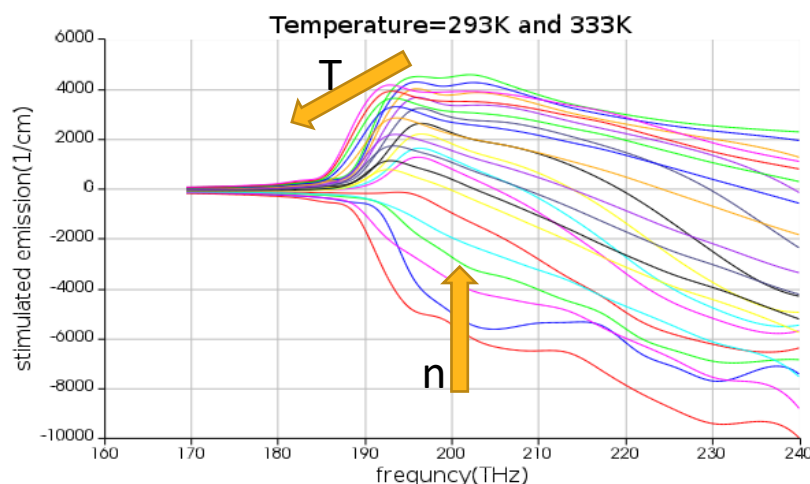

- Support multi-circuits netlisting
- Support hierarchical circuits

New feature:

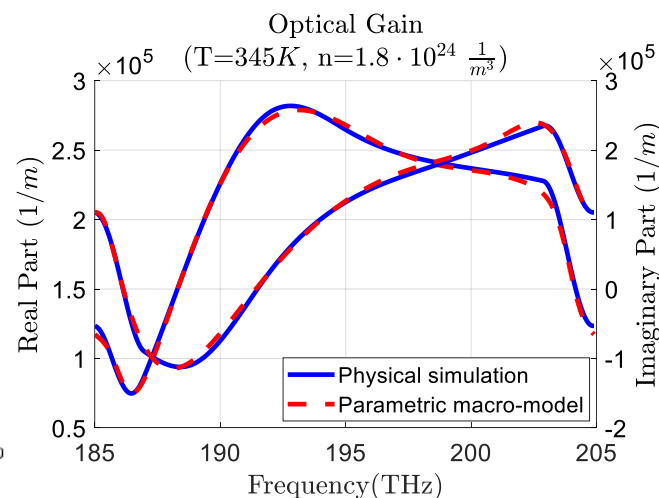

- Load project file or script to set up test benches

Laser Self-Heating

- Self-heating limits the output power and efficiency of the laser, impacts adjacent devices

Material gain from physical simulation or measurement: parameterized by carrier density & temperature

Reduced order model accurately fits & interpolates *arbitrary* gain spectra

Fast simulation of steady state laser power vs. current with physics-informed accuracy

Photonics Core Technologies

- New waveguide bend calculation in FEEM for bend loss and ring analysis
- Calculate diffracted order efficiencies of 1D and 2D gratings with new of RCWA solver (BETA)
 - Script interface available in FDTD
 - Dielectric materials, periodic boundaries

 **Ansys**
